DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of invention I in the reply filed on 6/13/07 is acknowledged. The traversal is on the ground(s) that the skate of claims 15-24 includes all the wheel structure of claims 1-14. This is not found persuasive because the spring structure is not recited in the skate claims 15-24.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 15-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention II, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 6/13/07.

3. This application contains claims 15-24 drawn to an invention nonelected with traverse in the reply filed on 6/13/07. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3618

6. A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 4 recites the broad recitation "at least five times", and the claim also recites "but preferably ten times" which is the narrower statement of the range/limitation.

Examiner note: Withdrawn claims 19 and 22 recite this as well.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Piper (US 7,090,306 B1) and in further view of Alexander (US 2,912,032 A).

Piper discloses a wheel 10 comprising a rim including first and second bearing sections 12, resilient support element 14 curved from said bearing elements, and a tire including 16, as shown in figures 1-4C. Piper does not disclose spring elements or a tread layer. Alexander does disclose a wheel comprising a tread layer 32 surrounding soft rubber sponge layer 42 and clamped support layer 10 and including spring elements 16, as shown in figures 1-2. It would have been obvious to one having ordinary skill in the art at the time of the invention to have provided the wheel of Piper with the tread layer and spring elements of Alexander in order to provide grip and suspension cushioning.
